

St Michael's Catholic College

Course Information

September 2024 -July 2025

Fine Art

A level

The A level Fine Art course at St. Michael's provides students with the opportunity to gain experience and understanding of a selection of art and design practices. You will be able to explore a variety of ways of seeing and thinking about what is around you and develop a coherent and personal visual language with which to express your ideas.

This course is aimed at creative minded pupils and encourages an adventurous and enquiring approach to art and design. Students will develop practical skills in drawing, painting, sculpture and related activities, which will enable them to express their own ideas. Students will develop an understanding of past and contemporary art and design practice.

Course content

The A level comprises 2 components:

Component 1: Personal Investigation (60%)

Part 1 – practical work:

- From personal starting points
- Students submit:
 - Supporting studies
 - Practical outcome(s)

Part 2 – personal study:

• Students submit a piece of continuous prose of a minimum of 1000 words.

Component 2: Externally Set Assignment (40%)

- Externally set, broad-based theme.
- Sustained focus period of 15-hours controlled assessment in which students create final response(s) to the theme.

Students submit:

- Preparatory studies
- Practical outcome(s)

How is the course examined?

- An internally assessed unit of coursework per year
- An externally set examination per year

Key Skills

Students will develop the following key skills:

- Develop intellectual, imaginative, creative and intuitive powers.
- Develop investigative, analytical, experimental, technical and expressive skills, aesthetic understanding and critical judgement.
- Develop knowledge and understanding of the role and achievements of artists, crafts people and designers in the past and in contemporary society.
- Develop an understanding of the relationship between, and the connections across the disciplines of art, craft and design.

What will this course prepare me for?

This A-level gives students the potential to progress to university onto an art-related degree course, through a pre-degree Foundation Diploma in Art and Design. The course could also lead to a career in teaching, fashion, gallery & museum management, architecture, interior design, graphics, film and television design, jewellery design, theatre and set design and production, TV and film, art directing or as an artist or art technician.

What are the entry requirements?

Students need to have achieved grade 5 or above in Art GCSE, plus a grade 5 in Maths and English.

Biology A (OCR)

A level

Biology aims to enhance your understanding and appreciation of living organisms' anatomy and physiology, how they function individually and how they interact with one another. It provides an opportunity to discuss and research issues in the news, with a focus on genetics and biotechnology. You will plan experiments, collect data, analyse experimental results and make conclusions. You will learn how scientific models are developed, the applications and implications of science, the benefits and risks that science brings and how society uses science to make decisions.

Course content

The A Level in Biology A specification content is divided into six teaching modules and each module is further divided into key topics. There are 5 examined modules and a separate standalone qualification in practical work.

Year one in Biology A course comprises the first four modules and learners in year two study the content of modules 5 and 6. The internally assessed Practical Endorsement skills also form part of the full A level. The skills developed can also be examined in the written exam papers. Successful completion of the practical skills element results in a Practical Endorsement on the A level certificate.

Module 1: Development of practical skills in biology

Practical Skills: Students must carry out a series of core practical skills and maintain a lab book. The skills developed can also be examined in the written exam papers. Successful completion of the practical skills element results in a Practical Endorsement on the A level certificate.

Module 2: Foundations in biology

Module 3: Exchange and transport

Module 4: Biodiversity, evolution and disease.

Module 5: Communication, homeostasis and energy.

Module 6: Genetics, evolution and ecosystems.

Career Value

Biology leads to a wide range of courses and careers, including an undergraduate degree in life sciences, medicine, environmental science, forensic science or an HND, or employment in areas of biological testing, biotechnology, independent research and the food industry.

In addition, a number of other courses either specifically require or find it desirable to have an Alevel in Biology. These include courses such as microbiology, medicine, veterinary medicine, biological sciences, environmental science, pharmacy and dentistry.

What are the entry requirements?

Students need to have achieved grade 7 or above in both core and additional science GCSEs. For

single sciences, they need to have achieved a grade 7 in Biology and Chemistry, in addition to a grade 6 in both English Language and Maths.

Business

A level

An AQA A Level Business includes questions that allow students to demonstrate their ability to, draw together their knowledge, skills and understanding from across the full course of study and provide extended responses.

The pupils will develop their critical thinking and creative skills through making decisions as an entrepreneur in markets such as the destructive technologies to the strategic performance of a large corporation. Trips include the Bank of England and the Mini plant in Oxford. Needless to say, Business as a degree is in the top 10 with regards to earning potential, this is dependent on being in a good university. Pupils can apply for Business related degrees, including Business Management, Business and Languages, Accountancy and Finance and Marketing.

Course content

The course is taught holistically throughout the 5 terms giving the pupil a thorough understanding of the different types of businesses.

Year 1 study from the entrepreneur to the large multinational. All the functions of a business, marketing, human resource, operational and finance are studied on how they help make decisions.

Year 2 delves deeper into strategy, from analysing the business's position to where the strategic change needs to be and the management of that strategic change.

This examination assesses a range of skills through a total of 3 papers.

- Paper 1 contains Multiple Choice questions, Short Answer Questions, Essay Questions.
- Paper 2 Data Response Questions
- Paper 3 Compulsory Case Study with 6 Questions

What are the entry requirements?

Students need to have achieved grade 5 in Maths and English.

Chemistry (AQA)

A level

Chemistry is the study of materials and their behaviour. These materials are from an enormous range – metals, medicines, plastics, dyes, ceramics, fertilizers and fuel to name just a few. Chemists are involved in how and why materials behave the way they do and how we can create or modify materials to better suit our needs. This course introduces you to the fundamentals of Chemistry and is a necessary choice for those interested in careers in Medical, Veterinary and Chemical Sciences, but chemistry combines well with many other A Levels.

A Level Chemistry is suited to pupils who have an interest in, and enjoy chemistry and are keen to find out about how things work in the real world. Pupils should enjoy applying their mind to solving problems and have a logical organised approach to learning.

Course content

There are 5 examined modules and a separate standalone qualification in practical work. Practical Skills:

Students must carry out a series of core practical skills and maintain a lab book. The skills developed can also be examined in the written exam papers. Successful completion of the practical skills element results in a Practical Endorsement on the A level certificate.

Module 2: Foundations in chemistry – students cover key concepts required throughout the remaining modules.

Module 3: Periodic table and energy

Module 4: Core organic chemistry

Module 5: Physical chemistry and transition elements

Module 6: Organic chemistry and analysis

Key skills

Students will develop the following key skills:

- appreciate how society makes decisions about scientific issues and how the sciences contribute to the success of the economy and society
- develop and demonstrate a deeper appreciation of the skills, knowledge and understanding of How Science Works
- develop essential knowledge and understanding of different areas of chemistry and how they relate to each other

Career Value

Whilst many job opportunities specifically using chemistry require higher qualifications, most laboratory-based jobs benefit from a chemistry qualification, for instance dental assistant or veterinary assistant. Many employers view success at A-level Chemistry as a clear indication of sound academic ability. Many science based university courses have a significant proportion of Chemistry content and an A-level in Chemistry is excellent preparation for such further study. Such courses include medicinal chemistry, forensic science, toxicology and pharmacology.

In addition, a number of other courses either specifically require or find it desirable to have an Alevel in Chemistry. These include courses such as chemical engineering, medicine, veterinary medicine, biological sciences, environmental science, pharmacy and dentistry.

What are the entry requirements?

Chemistry requires good scientific and mathematical skills. Students need to have achieved a grade 7 or above in both GCSE Core and Additional Science, or GCSE Chemistry. Pupils must also have achieved at least grade 6 in English and Maths.

Computer Science

A Level

The Vision – why choose A Level Computer Science?

OCR A Level Computer Science is a practical subject where you can apply the academic principles learned in the classroom to real-world systems. It is an intensely creative subject that combines invention and excitement, that can look at the natural world through a digital prism. The course highly values computational thinking, helping you to develop the skills to solve problems, design systems and understand the power and limits of human and machine intelligence. These are the

concepts that lie at the heart of the Computer Science qualification. They will be the best preparation for those of you who want to go on to study Computer Science at a higher level and will also provide a good grounding for other subject areas that require computational thinking and analytical skills.

Specific Benefits of A Level Computer Science

- The new qualifications will be focused on programming, will build on our GCSE Computing and emphasise the importance of computational thinking as a discipline.
- There will be an expanded maths focus, much of which will be embedded within the course.
- Computational thinking will be at the core of the new specifications.
- The A Level will consist of three components, two of which will be externally marked question papers making up 80% of the qualification. The other 20% will be the coursework project, which will retain its current qualities but will be more focused, with a greater emphasis on coding and programming with a simple assessment model and marking criteria.

What are the entry requirements?

Students need to have achieved grade 6 or above in Maths.

ASSESSMENT

Component	Assessment	Weighting	Marks and duration
01 Computer	Externally marked	40%	140 marks/2 hrs 30mins
systems	question paper		
02 Algorithms	Externally marked	40%	140 marks / 2 hrs 30mins
and	question paper		
programming			
03	Internally assessed	20%	70 marks
Programming	Externally moderated		
project			

Component			
01 Computer	Mix of question types:	The characteristics of contemporary	
systems	including short-answer,	processors, input, output and storage	
	longer-answer, and	devices	
	banded mark-scheme-	Components of a computer and their uses	
	type questions.	Software and software development:	
		Types of software and the methodologies	
		used to develop them	
		Exchanging data:	
		How data is exchanged between different	
		systems	
		Data types, data structures and	
		algorithms How data is represented and	
		stored in different structures and the use	
		of different algorithms	

		Legal, moral, cultural and ethical issues
		Laws surrounding the use and ethical
		issues that can arise from the use of
		computers
02 Algorithms	Two sections:	Sections A and B
and	A – Traditional questions	Elements of computational thinking
Programming	concerning	What is meant by computational thinking
	computational thinking.	
	Mix of question types:	Problem solving and programming
	including short-answer,	How computers are used to solve
	longer-answer, and levels	problems and programs can be written to
	of response mark	solve them
	scheme-type questions.	
	B – Scenario/task	Algorithms
	contained in the paper,	The use of algorithms to describe
	which could be an	problems and standard algorithms
	algorithm but will involve	
	problem solving.

	Objectives.	
	Objectives.	

Drama & Theatre Studies

A Level

Are you a group player, a critical thinker? Do you like performing? Do you like to read and explore plays from a variety of eras? Are you interested in how a director/actor/designer produces a show? Then this is the A Level for you.

Course content/structure:

Component 1: Theatre Workshop

Non-exam assessment: internally assessed, externally moderated 20% of qualification

Learners will be assessed on either acting or design.

Learners participate in the creation, development and performance of a piece of theatre based on a reinterpretation of an extract from a text chosen from a list supplied by WJEC. The piece must be developed using the techniques and working methods of either an influential theatre practitioner or a recognised theatre company. Learners must produce:

- a realisation of the performance or design
- a creative log.

Component 2: Text in Action

Non-exam assessment: externally assessed by a visiting examiner

40% of qualification

Learners will be assessed on either acting or design.

Learners participate in the creation, development and performance of two pieces of theatre based on a stimulus supplied by WJEC:

1. a devised piece using the techniques and working methods of either an influential theatre practitioner or a recognised theatre company (a different practitioner or company to that chosen for Component 1)

2. an extract from a text in a different style chosen by the learner. Learners must realise their performance live for the visiting examiner. Learners choosing design must also give a 5-10 minute presentation of their design to the examiner. Learners produce a process and evaluation report within one week of completion of the practical work.

Component 3: Text in Performance

Written examination: 2 hours 30 minutes - 40% of qualification

Sections A and B - Two questions, based on two different texts, one written pre-1956 and one written post-1956.

Section C - A question based on a specified extract from: The Curious Incident of the Dog in the Night-Time, Mark Haddon, adapted by Simon Stephens

Career Value

Students will go on to study a range of subjects as well as Drama at degree level including Psychology, Sociology, Law, Business, social sciences, Media and English Literature to name a few. Drama provides students skills that allows them to be confident, organised, independent, critical thinkers that are a credit to any workplace, therefore opening doors to a number of different career pathways.

What are the entry requirements?

Students need to have achieved grade 5 (or above) in English and/or Drama

Economics (Pearson)

A level

One of the great things about studying Economics is that students learn about real life, topical Economic issues, such as the 'credit crunch,' property bubble and recession. They are expected to understand and keep up to date with the changing economic situation by reading newspaper articles and using relevant websites, such as government statistical web pages. Studying Economics should be about being interested and informed about the economy and everything we study is placed in the wider, real life context. There are regular classroom discussions, which encourage students to verbalise their knowledge and opinions. In addition, classes have an exam focus so that students continually, and from very early on, get exam question practice.

Year 1: Markets, Consumers and Firms

- Scarcity, choice and potential conflicts
- Enterprise, business and the economy
- Introducing the market: the price mechanism

- Markets, consumers and competition
- The role of credit in the economy
- Market failure and government intervention
- Revenue, costs, profits and cash
- Glossary of key terms in Theme 1

Year 2: The Wider Economic Environment

- Business growth and competitive advantage
- Firms, consumers and elasticities of demand
- Productive efficiency
- Life in a global economy
- The economic cycle
- Introduction to macroeconomic policy

Assessment will include three exams at the end of year 13.

What are the entry requirements?

Students need to have achieved grade 6 or above in English and Maths.

English Literature

A level

Who is the Course for?

First and foremost, to study this course you must love reading and love English Literature. You must enjoy analysing the language, purpose, structure and themes of literary texts in great detail and be passionate and confident about discussing novels, poetry and drama texts and what they can teach us about ourselves. You must possess intellectual curiosity, the ability to work and read independently and develop your own interpretations about texts, being prepared to read material about your texts as well as the texts themselves.

Course Content

Paper One

Here you study three texts: one poetry and one prose text, of which will have been written pre-1900, and one Shakespeare play. The exam will include two unseen poems. The written exam is 3 hours, open book in Section C only and 40% of A-level.

Paper Two

This has two options, which will depend on your teacher: WW1 and its aftermath or Modern times: literature from 1945 to the present day. You study three texts: one prose, one poetry, and one drama, of which one will have been written post-2000. The exam will include an unseen extract. It is a written exam of 2 hours 30 minutes. It is open book and 40% of A-level.

Paper Three

This is a comparative critical study of two texts, at least one of which will have been written pre-1900. You submit one extended essay (2,500 words) and a bibliography. It is 20% of A-level, assessed by teachers and moderated by AQA.

The course encourages you to develop your critical and analytical skills, as well as your knowledge, love and wider reading of English Literature. You will need to be able to communicate effectively and accurately in your essays, showing insight into how writers use language, structure and form to explore their ideas.

The ability to motivate yourself and work independently is crucial, as you will be asked to undertake much wider reading and research. Most of your essays and coursework will be completed outside of lessons and the ability to meet deadlines is crucial. As well as coursework, you will undertake several exams over the two years of the course, so levelheadedness and the ability to write quality essays under pressure is also essential.

Key Skills.

Oral and written communication.

Appreciation and understanding of literary texts and their Social, cultural, historical and philosophical contexts.

Critical Analysis and interpretation of texts.

Creative and empathetic response to texts.

Wider reading across the field of poetry, prose and drama.

Self-motivation and independent learning.

Academic presentation and essay writing skills.

Career Value

This course will help prepare you for a wide range of higher education degree courses, including law, journalism, teaching and the media. It is also excellent for any degree course, which includes essay writing, particularly, Arts, Humanities and Language courses.

What are the entry requirements?

You must achieve at least a grade 6 in both GCSE English Language and/or English Literature to gain entry to the A Level English Literature or course.

A level

English Language

Who is the course for?

To study this course you must be inquisitive about language, its various uses and origins. As the dominant language in the modern world, communication through English governs the media, advertising, law and business but also – some would argue – shapes our view of the world around us. In working towards an English Language A-Level, you will learn about both the past and the present of the language. You will be encouraged to analyse how it is used in spoken and written texts, ranging from conversations between teenagers in London to politicians in debate on TV, marketing material for products to WhatsApp exchanges and magazines. You will study the phonology, lexis, semantics, grammar, discourse and pragmatics of the language in everyday use, developing your understanding and appreciation of English in all its forms and contexts.

Course Content

The course encourages you to develop your critical and analytical skills, as well as your knowledge and understanding of English Language. You will need to be able to communicate effectively and accurately in your essays, showing insight into how language is utilised for different purposes and in different forms.

The ability to motivate yourself and work independently is crucial, as you will be asked to undertake much wider reading and research. Most of your essays and coursework will be completed outside of lessons and the ability to meet deadlines is crucial. As well as coursework, you will undertake three exams at the end of the two-year course.

Unit 1 - Language Variation	Unit 2 - Child Language
35% of total	20% of total
Students will explore:	Students will explore:
 how language choices can create personal identities through age, gender, location and occupation. language variation in English from c1550 (the beginnings of Early Modern English) to the present day. Written examination, lasting 2 hours 15 	 spoken language acquisition and how children learn to write between the ages of 0 and 8. the relationship between spoken language acquisition and literacy skills that children are taught, including the beginnings of reading and appropriate theories of children's language development.
minutes.	Written examination, lasting 1 hour.
Unit 3 - Investigating Language	Unit 4 - Crafting Language
25% of the total qualification	Coursework 20% of the total qualification
Students will:	Students will:
 select a research focus from five topic areas, develop their research and investigation skills, undertake a focused investigation, apply their knowledge of language levels and key language concepts developed through the whole course and develop their personal language specialism. 	 research a selected genre; demonstrate their skills as writers within their selected genre, crafting texts for different audiences and/or purposes, reflect on their research and writing in an accompanying commentary. Students produce two assignments: Assignment 1: two pieces of original writing from the same genre, differentiated by
Written examination, lasting 1 hour 45 minutes.	function and/or audience. Assignment 2: one commentary, reflecting on the two pieces of original writing produced and making connections with research undertaken. Advisory total word count is 2500–3000 words: Assignment 1 is 1500–2000 words and Assignment 2 is 1000 words.

Career Value

This course will help prepare you for a wide range of higher education degree courses, including law, journalism, teaching and the media. It is also excellent for any degree course, which includes writing, particularly, Arts, Humanities and Language courses.

What are the entry requirements?

Students need to have achieved grade 6 or above in English Language and/or English Literature at GCSE.

Geography

A level

Geography helps you to make sense of the world around you. At A Level, Geography allows you to study human societies and their interactions with the physical environment. Climate change, migration, natural disasters, inequality and water insecurity are just some of the challenges

facing the next generation. All of these topics are covered in depth within A Level Geography, whist developing a wide range of skills such as essay writing and data analysis. Geography is highly valued by universities as an A Level choice.

Course content:

Students will study a range of physical and human topics which are assessed in two exams at the end of the two-year course.

- Water and carbon cycles
- Hazards
- Coastal systems and landscapes
- Global systems and global governance
- Changing places
- Population and the environment

Students will also have the opportunity to go on a fieldtrip and collect data for their coursework. This is a written report between 4,000-5,000 words.

Key Skills

A range of key skills are covered in Geography. Some of these include:

- Analytic skills you will be able to analyse graphs, maps and photographs
- Evaluating evidence you will learn to make decisions about global issues
- Critical thinking you will practise questioning facts and offering your own opinion
- Application of knowledge you will bring independent research to class to discuss and comment on it
- Responding to case studies you will evaluate real-life examples to link directly with your class work
- Fieldwork skills you will be able to plan and carry out an individual fieldwork investigation as well as utilising virtual fieldwork opportunities and ICT facilities in the college

Career Value

Geography students are seen as highly employable due to the combination of transferrable skills developed at A Level. Studying Geography at A Level opens many doors and its relevance to our ever-changing world has seen it be described as the 'must have A Level' (Guardian, 2018).

What are the entry requirements?

Students need to have achieved Grade 5 in Maths and English, and a Grade 6 in Geography.

A level Government & Politics

In A level Politics we want to give you the skills to understand the biggest problems questions the world is currently struggling with; why do some people not vote in elections in the UK when in other countries people are still fighting for the vote? How can Brexit divide so many people? How can Donald Trump win an election by pretending Mexico will pay for the USA's border?

If you have ever watched the news and been confused and interested then we may be right for you. We arrange trips to Parliament, have visits from our Local MP, arrange opportunities to get involved in local issues and give you all the help you need to succeed in you're A-level. Your course will be assessed by three exams at the end of year 13:

<u>1.</u> <u>UK Politics</u>- 2 hour exam that equals 33% of grade

How should we pick who is in charge? Should young people be given the vote? Topics: Democracy and participation, Political parties, Electoral systems, Media. Ideology, A chance to lean about the philosophy of politics, are humans naturally good? Should money be abolished? We examine some of the key thinkers and controversies around **Conservatism, Liberalism and Socialism**.

2. UK Government- 2 hour exam that equals 33% of grade

An examination of how the UK system operates, where power is and how it changes. Topics: the Constitution, Parliament, Prime Minister and Executive, Relationships between the branches of government.

Ideology: Anarchism, Can society exist without a government? Chaos vs Order.

3. USA - 2 hour exam that equals 33% of grade

Is America the perfect Democracy? How does the USA deal with issues differently to the UK? Topics: US Constitution and federalism, US Congress, US Presidency, US Supreme Court and Civil rights.

Career:

Would you like to swap places with our Prime Minster to try and see Brexit through? Studying politics is not just about trying to become an MP. Learning about politics will help you find out what you think about the world. We want you to develop strong convictions, to know when to compromise or confront an issue. We will help you build up your confidence in researching and arguing. These are desired skills in a whole range of professions. These are also essential skills for anybody thinking of becoming a Lawyer. You could explore the seedy halls of power as a Journalist. Take a stand against in justice as part of a Pressure Group or Political Party. Guide the hand of Government through the civil service. Changing the international climate at the United Nations.

From life we can hope for more than a good job, Politics give you a chance at real power, the power of winning arguments against your friends and family.

What are the entry requirements?

Politics is assessed entirely through timed essays so you will need at least 6 in History or Geography. If you haven't taken these GCSE's then you need an English grade at 6 or above.

History

A level

No human being in the history of the world has been bombarded with more information than you and your generation. Most of this information is trying to make you think in certain ways and do certain things. Studying History at A Level gives you the tools with which face these challenges. It will allow you form your own considered opinions on the world and to understand your position in it.

Not only will this course make you a stronger person, it will also make you more attractive to universities and employers. By doing well in A Level History, you will have demonstrated that you can build balanced arguments, sit lightly on your conclusions, empathise with different people from

different backgrounds and time periods and that you are not afraid of independent reading and writing. It will show that you are curious about the world. Remember: The present is only the leading edge of the past and that today will tomorrow be yesterday. Welcome to the future!

This course is studied in 3 units split over 2 years (AQA Exam Board) 1. Challenge and Transformation: Britain, c1851–1964 (1 Exam, 40%)

This option allows students to study in breadth issues of change, continuity, cause and consequence in this period through the following key questions:

- How did democracy and political organisations develop in Britain?
- How important were ideas and ideologies?
- How and with what effects did the economy develop?
- How and with what effects did society and social policy develop?
- How and why did Britain's relationship with Ireland change?

• How important was the role of key individuals and groups and how were they affected by developments?

2. The Cold War: c1945–1991 (1 Exam, 40%)

This option provides for the study in depth of the evolving course of international relations during an era of tension between communist and capitalist powers, which threatened nuclear Armageddon. It explores concepts such as communism and anti-communism, aggression and détente and also encourages students to reflect on the power of modern military technology, what hastens confrontation and what forces promote peace in the modern world.

3. Historical Investigation (Coursework, 20%)

France in Revolution: 1681-1789

The purpose of the Historical Investigation is to enable students to develop the skills, knowledge and historical understanding acquired through the study of the examined components of the specification. Through undertaking, the Historical Investigation students will develop an enhanced understanding of the nature and purpose of history as a discipline and how historians work.

The Historical Investigation contributes towards meeting the aims and objectives of the A-level specification. In particular it encourages students to:

- ask relevant and significant questions about the past and undertake research
- develop as independent learners and critical and reflective thinkers
- acquire an understanding of the nature of historical study
- organise and communicate their knowledge and understanding in a piece of sustained writing

What are the entry requirements?

History at grade 6 or above.

Maths

Who is the course for?

This course is for students wishing to further their mathematical knowledge and those wishing to study maths or a related subject at Higher Education, e.g. engineering, computing, business, economics and psychology.

Course content

Students will study a combination of core and applied mathematics (statistics and mechanics). Each

A level

of these disciplines will be assessed at the end of the course in three written papers, each being two hours in length.

Core Mathematics (papers 1 and 2) – Core mathematics makes up 2/3 of the course. In core mathematics, you will deepen your knowledge of topics, which you met at GCSE such as algebra, trigonometry and graphical work. You will learn other important branches of mathematics such as calculus, functions, logarithms and series.

Mechanics and Statistics (paper 3) – Unlike in previous years, from 2017 mechanics and statistics will both be studies throughout year 12 and 13. At the end of year 13 you will sit a combined assessment in both disciplines.

Mechanics - In mechanics, you will learn how to describe mathematically the motion of objects and how they respond to forces acting on them, from cars to satellites. You will learn the technique of mathematical modelling; that is of turning a complicated physical problem into simpler one that can be analysed and solved using mathematical methods.

Statistics – This extends the work you did in the data handling part of your GCSE course. The course looks at mathematical modelling in statistics and probability. You will cover probability, discrete distributions, the normal distribution and correlation. In a change to previous A-level, courses your study of statistics will be based around a pre-release data set which you will get to know throughout the course.

Content overview	Content overview	
(Papers 1 and 2)	(Paper 3)	
• Proof	Section A: Statistics	
 Algebra and functions 	 Statistical sampling 	
• Coordinate geometry in the (x,y) plane	 Data presentation and interpretation 	
 Sequences and series 	 Probability 	
 Trigonometry 	 Statistical distributions 	
 Exponentials and logarithms 	 Statistical hypothesis testing 	
 Differentiation 	Section B: Mechanics	
 Integration 	 Quantities and units in mechanics 	
• Vectors	Kinematics	
 Numerical methods 	 Forces and Newton's laws 	
	Moments	

Assessment

Assessment is completely by examination and the end of year 13. All assessments allow the use of a scientific calculator and will be 2 hours in length.

Career Value

Mathematics is an excellent qualification to study if you want to pursue a career in business and management where financial transactions are required and is accepted by employers as evidence of numerate ability. Many professional qualifications including accountancy and actuarial work require A Level Maths. The A level provides entry to university to read Mathematics, Science, Technology, Economics, Computer Science or Business. The difficulty of this course means that

success is also a good indicator of students' perseverance and academic prowess to employers and universities.

What are the entry requirements?

Enthusiastic Mathematicians with at least a grade 7 or above in GCSE Maths.

Further Maths

A level

A separate A Level in Mathematics including 2 further maths modules and 2 applied modules. This A Level covers a broader range of topics covering complex numbers, proof by induction, matrices and polar coordinates. The applied modules can be chosen from Decision, Mechanics or Statistics.

Assessment

Assessment is completely by examination and at the end of year 13. Each module exam lasts for two hours.

Career Value

This is an excellent qualification to study if you want to pursue a career in business and management where financial transactions are required and is accepted by employers as evidence of numerate ability. Many professional qualifications including accountancy and actuarial work require A level Maths. The A level provides entry to university to read Mathematics, Science, Technology, Economics or Business.

What are the entry requirements?

Enthusiastic Mathematicians with a grade 8/9 in GCSE Maths.

Media Studies

A level

Who is the Course for?

In A Level Media Studies, we examine the ways in which media institutions and producers influence people and shape our understanding of ourselves and the world around us. The analysis of key media texts is an essential part of the course. You will be analysing the various components of these media texts in great detail so the ability to communicate ideas, think critically and engage proactively will be essential to your success in this subject. To study this course you must have strong literacy skills and demonstrate creative flair for the production of your own media artefacts. Written tasks and assessments are regular features of this course and you will be expected to undertake independent study and extra reading around a wide range of media-related topics.

Course Content

During the two-year course, you will learn more about the following areas of study through close analysis of carefully chosen media texts, a thorough application of theoretical perspectives and a major coursework project, which will constitute 30% of your final grade. The remaining 70% of the course will be assessed in two written papers.

1. Media Language - Through their forms, codes, conventions and techniques, students will learn how the media communicates meanings for audiences through media texts such as advertisements, television programmes and newspaper reports.

2. Media Representation - Students will discover how the media portrays events, issues, places, individuals and social groups through the processes of selection, construction and mediation of media texts.

3. Media Industries - This area of study will introduce students to the processes of production, distribution and circulation by media industries through media forms and platforms. Case studies of specific media institutions, practices and technologies will be fundamental to this area of study.

4. Media Audiences - Students will learn how media institutions and their texts target, reach and address audiences, how audiences interpret and respond to them and how members of audiences become producers themselves. The analysis of audience demographics and the diversity of social contexts will form the basis of this area of study.

Key Skills

Written and oral communication. Creative skills in audio-visual media. Analytical skills. Academic presentation and essay writing. Wider reading of media-related books, journals and academic articles. Self-motivation and independent learning.

Career Value

A Level Media Studies offers excellent preparation for any one of the many creative arts courses available in higher education. The subject complements other disciplines in the creative arts and humanities including Art & Design, English and Sociology. Although competition is tough, graduates of creative arts subjects like Media Studies have a very good rate of employment after university, many within the diverse and ever-expanding creative industries.

What are the entry requirements?

Students need to have achieved at least a grade 5 in English Language and/or Media Studies.

Modern Foreign Languages: French or Spanish

A Level

Why should I study French or Spanish A Level?

Learning how to interact with speakers of other languages means you are less likely to be stuck in one mode of thinking. It can help you to see things from a range of perspectives - making you more adaptable, creative, and insightful. The ability to operate cross-culturally is becoming just as much valued by employers as straight language skills.

Studying a language at A Level is very different from GCSE. You will have the opportunity to explore a truly fascinating subject that offers you a huge range of career possibilities at the end...and have a lot of fun along the way! What's more, a language is also now an essential requirement for lots of university courses.

What would I study in French or Spanish A Level?

A Level language courses are designed to really immerse you in the culture of francophone or Spanish speaking countries, both global languages. The course covers a huge range of contemporary topics and helps you gain a broad range of knowledge, not just about the language you are learning but also about life in the countries where that language is spoken.

You will investigate many aspects of life in France and French-speaking or Spain and Latin American countries and have the freedom to tailor your studies to suit your own area of interest, be it fashion, food or films. You will study contemporary social issues including crime, racism and immigration together with politics and popular music. You will find out about the fascinating history of a region, a country or a historically significant person, including contemporary ones. Of course, you cannot really get to know a language without experiencing it first-hand and a language A Level would include a range of trips and visits.

The following exams will be taken at the end of year 13:

Paper 1: Listening, reading and writing - 2hr 30 minutes- 50% of A Level.

Paper 2: Writing - 2 hours- 20% of A Level.

Paper 3: Speaking - 21-23 minutes (including 5 minutes' preparation time)- 30% of A Level. Career Value

In today's increasingly global society, the ability to speak a foreign language is becoming more and more of an asset. The skills and qualifications that you gain from an A Level in languages are incredibly important tools to have under your belt. In fact, having a language A Level can increase your salary by up to 20% and give you a head start on other potential employees – by speaking another language, you are vital to any company who does international business, and there are a lot of them nowadays!

What are the entry requirements?

You will need at least a 6 in GCSE French/Spanish to be able to do the A Level. A Level will be taught for 5 lessons per week and based around the 4 key language skills: reading, writing, speaking and listening. You sit exams in all of these areas but for the speaking exam you will have the chance to choose the topic which interests you the most.

Physics (AQA)

A level

The A Level Physics course takes you into the heart of what is widely regarded as the most fundamental of all sciences. Studying physics can see you grasping the scope of massive galaxies or probing the tiniest component particles of atoms. Physics is the study of how everything works and the basic rules of the universe and is full of challenges and opportunities. A Level Physics can also lead to a wide range of career opportunities.

A level Physics is suited to pupils who have an interest in, and enjoy physics and are keen to find out how the Physical world works. Pupils should enjoy applying their mind to solving problems and carrying out investigations. Pupils must have strong mathematical skills and find solving mathematical problems satisfying.

Course content

There are 5 examined modules and a separate standalone qualification in practical work.

Practical Skills: Students must carry out a series of core practical skills and maintain a lab book. The skills developed can also be examined in the written exam papers. Successful completion of the practical skills element results in a Practical Endorsement on the A level certificate.

Module 2: Foundations in physics – students cover key concepts required throughout the remaining modules.

Module 3: Forces and motionModule 4: Electrons, waves, and photonsModule 5: Newtonian world and astrophysicsModule 6: Particles and medical physics

Key skills

Students will develop the following key skills:

- appreciate how society makes decisions about scientific issues and how the sciences contribute to the success of the economy and society;
- develop and demonstrate a deeper appreciation of the skills, knowledge and understanding of How Science Works;
- develop essential knowledge and understanding of different areas of physics and how they relate to each other, and to the other sciences.

Career Value

Studying Physics leads on to a wide range of courses and careers. A physics qualification is essential for many future careers in science and engineering. It can also help you make progress in other fields that value the demanding skills developed through physics. Many accountants, bankers and business managers have benefited from studying physics, as well as astronomers, radiographers, laser technologists, semiconductor technologists, meteorologists, scientific journalists, product marketing engineers and civil engineers.

What are the entry requirements?

Physics is a challenging subject and requires good scientific and mathematical skills. Students need to have achieved at least a grade 7 or above in both GCSE Core and Additional Science, or GCSE Physics. Pupils must have also have achieved at least grade 6 in English and grade 7 or above in GCSE Maths.

*It would also be beneficial for students taking A level Physics to consider taking A Level Maths also.

Product Design or Textiles

The college runs both Product Design and Fashion and Textiles with the OCR exam board. Both courses are designed to stretch and challenge creative students with an interest in Fashion and Textiles or Product Design.

Both courses follow the same structure, but differ in the outcomes dependant on the material area of focus. The course focuses on:

Inspiring a future in design and technology – Drawing on authentic design practice and contemporary technologies students will be free to explore design possibilities that excite and engage them, giving a strong foundation for further study and developing thinking and design skills that will support them in any future direction.

A focus on iterative designing – Students will learn to deliver their thinking and design skills through iterative design processes that allow them to 'explore, create and evaluate' following practices and strategies used by the creative, engineering and manufacturing industries.

A level

Projects that offer so much more – The non-examined assessments at A Level are not only open in approach, they will also enable students to develop critical thinking and problem solving skills that give them confidence as individuals and a strong understanding of creativity and innovation that will equip them to design and manage the future. The project work undertaken will be a meaningful discussion piece for university and apprenticeship applications.

Assessment Breakdown for A Level

50% Iterative Design Project – 100 marks (non-exam assessment)

The 'Iterative Design Project' requires learners to undertake a substantial design, make and evaluate project centred on the iterative processes of explore, create and evaluate. Learners identify a design opportunity or problem from a context of their own choice, and create a portfolio of evidence in real time through the project to demonstrate their competence.

26.7% Principle of Textiles/ Product Design Exam – 80 Marks

This paper is set out through four sets of questions that predominantly cover technical principles within each endorsed title. Learners will be required to:

- analyse existing products
- demonstrate applied mathematical skills

• demonstrate their technical knowledge of materials, product functionality, manufacturing processes and techniques

• demonstrate their understanding of wider social, moral and environmental issues that impact on the design and manufacturing industries.

26.7% Problem solving in Textiles/ Product Design Exam – 80 Marks

This component has a series of longer answer questions that require learners to demonstrate their problem solving and critical evaluation skills. Learners will be required to:

• apply their knowledge, understanding and skills of designing and manufacturing prototypes and products

• demonstrate their higher thinking skills to solve problems and evaluate situations and suitability of design solutions.

What are the entry requirements?

5 or above in Art or a Technology subject at GCSE, plus at least a grade 5 in English and Maths.

Psychology

A level

Summary

Psychology is the study of human behaviour and builds on skills developed in both the sciences and humanities. The AQA specification is designed for students to engage with the fundamentals of the subject, including core theories and concepts whilst also developing skills such as critical analysis and research. Students will apply the theories they learn to various real- life contexts and will have the opportunity to conduct their own research.

Year 1 Outline

In year 1, students develop a broad knowledge and understanding of some core aspects of Psychology through a range of topics:

Approaches to Psychology, Research Methods, Social Influence, Memory, Attachment, Psychopathology and Biopsychology

Year 2 Outline

In year 2, the specification offers one compulsory module; Issues and Debates in Psychology plus three topic-based options, which bring together explanations from different psychological approaches. The chosen taught options are Relationships, Schizophrenia, and Aggression.

Key Skills

Students will use theories, models and ideas to explore, compare and evaluate psychological concepts and phenomena. Discussion is a central skill in challenging explanations of human behaviours and in considering issues with research methodology and findings. At the end of year 2, students will sit 3 papers.

Paper 1: Social Influence, Memory, Attachment and Psychopathology

Paper 2: Approaches, Biopsychology and Research Methods

Paper 3: Issues and Debates, Relationships, Schizophrenia and Aggression

What are the entry requirements?

One third of the A-Level marks will relate to mathematical skills and research methods therefore requiring students to have achieved a <u>grade 6 or above in Maths</u> at GCSE. A substantial number of marks will be obtained through extended response answers, therefore requiring students to have achieved a <u>grade 6 or above in English</u> at GCSE. As Psychology is a science, the specification includes some challenging scientific content, therefore requiring students to have achieved a <u>grade 6 or above in Science</u> at GCSE.

Religious Education

A Level

Background

The Religious Studies A level course gives you the opportunity to study some of the fundamental questions which people have always asked about:

- Why are we here?
- How should we behave?
- What happens to us when we die?
- How do religious believers explain & explore their beliefs?

From the OCR specification:

The content has been designed to provide a coherent and thought-provoking programme of study for both teachers and learners, whilst also acting as a rigorous course of study which prepares learners for progression to Higher Education. This qualification is designed to develop a greater understanding and appreciation of religious beliefs and teachings, as well as the disciplines of ethics and philosophy of religion. Learners will develop their skills of critical analysis in order to construct balanced, informed arguments and responses to religious, philosophical and ethical ideas. OCR's A Level Religious Studies course aims to engage learners thoroughly and develop an interest in Religious Studies which extends beyond the classroom and can be applied to the world around them.

<u>Religious Studies involves some major academic disciplines such as Theology, Religious Ethics</u> and Philosophy of Religion. Consequently, you will study some of the following themes:

Theology (Developments in Christian thought) -

- Religious beliefs, values and teachings, their interconnections and how they vary historically and in the contemporary world.
- Sources of religious wisdom and authority.
- Practices which shape and express religious identity, and how these vary within a tradition significant social and historical developments in theology and religious thought.
- Key themes related to the relationship between religion and society in the context of one religion.

Moral Philosophy -

- Normative ethical theories
- The application of ethical theories
- Contemporary issues of importance ethical language and thought
- Debates surrounding the significant idea of conscience
- Sexual ethics and the influence on ethical thought of developments in religious beliefs.

Philosophy of Religion -

- Ancient philosophical influences
- The nature of the soul, mind and body
- Arguments about the existence or non-existence of God
- The nature and impact of religious experience
- The challenge for religious belief of the problem of evil
- Ideas about the nature of God
- Issues in religious language.

Colleges and universities place great value on this Religious Studies course because it helps develop thinking and analytical skills, the ability to develop and structure an argument, textual analysis and it fosters independent thinking.

This course complements a variety of other A level courses. In the past students who have studied a wide range of subjects, including English, History, Sociology, Geography, Drama, Languages, Psychology and Maths have made use of transferable skills. This course also supports those who study the sciences, particularly those who wish to follow a career in Medicine.

Assessment Objectives & Assessment Methods:

In common with all the new A level qualifications the full A level qualification is the result of a twoyear course. It is assessed by 'terminal' exams in the summer of Year 13. Exams will be a set of **three 2hr exams**. **A01** Demonstrate knowledge and understanding of religion and belief, including:

- religious, philosophical and/or ethical thought and teaching
- influence of beliefs, teachings and practices on individuals, communities and societies
- cause and significance of similarities and differences in belief, teaching and practice
- approaches to the study of religion and belief.

Weighting 40%

A02 Analyse and evaluate aspects of, and approaches to, religion and belief, including their significance, influence and study.

Weighting 60%

Exam Board A-LEVEL RELIGIOUS STUDIES OCR - H573

What are the entry requirements?

Students need to have achieved a grade 6 or above in R.E. and English.

Sociology

A Level

Sociology is the science of society. As sociologists we ask questions about how people live together and engage within different social institutions. We examine society through the eyes of Feminists, Marxists, Functionalists and a range of competing philosophy's because we want you to develop your own ideas as you attempt to understand and answer some of the biggest questions in or society.

Your course will be assessed by three exams at the end of year 13:

1. Exam 1 - Education and Theory 2-hour exam that equals 33% of grade

How does our education system work and what is the goal of it? Are we trying to create young confident citizens to lead a future society or are we trying to create productive workers capable of thriving in a competitive jobs market? We will also look at debates around racism and sexism in education.

2. Culture and Identity 2-hour exam that equals 33% of grade

Do you feel British? does the State feel you are British? Where do these ideas come from and why do they have power? What else makes individuals feel part of society- their Gender, Class, Race, Religion, Sexuality? How do these identities interact?

3. Crime and Deviance - 2-hour exam that equals 33% of grade

Who defines Crime and what is Criminal behaviour? An examination of theories connected to criminology examining the defining of crime, the policing of different groups and how crime is punished and whether it is successful in changing people's behaviour.

<u>What are the entry requirements</u>? Sociology is assessed entirely through timed essays so you will need at least 5 in History or Geography. If you haven't taken these GCSE's then you need an English grade at 5 or above.

T Levels: what they are

T Levels are new 2-year courses which are taken after GCSEs and are broadly equivalent in size to 3 A Levels. They have been developed in collaboration with employers and education providers so that the content meets the needs of industry and prepares students for entry into skilled employment, an apprenticeship or related technical study through further or higher education.

T Levels offer students practical and knowledge-based learning at a school and on-the-job experience through an industry placement. Every T Level includes an industry placement with an employer focused on developing the practical and technical skills required for the occupation, in this case Management & Administration. These will last a minimum of 315 hours (approximately 45 days).

Entry to higher education and UCAS tariff points

T Levels provide several progression options for students, including:

- skilled employment
- an apprenticeship
- higher education

To help T Level students' progress into higher education, UCAS tariff points are allocated to T Levels. These are broadly in line with the points currently awarded for CTEC courses. However, UCAS points are allocated to the overall T Level grade and so students must achieve at least an overall pass grade to receive UCAS points.

Course Structure

At St. Michael's we plan to offer the City & Guild T Level in Management & Administration. The structure of the course includes: a Core element; an Industry Placement and an Employer Set Project; and an Occupational Specialism.

<u>Core</u> – assessed via 2 x 2.5-hour exams

- 660 Total Learner Hours focusing on:
 - o 1. Contexts that organisations operate and manage in.
 - 2. Key people and stakeholders that support business operations.
 - \circ 3. Quality and compliance standards that affect business operations.
 - 4. Financial contexts that organisations operate within.
 - 5. Key policies and procedures that support organisations.
 - 6. Concepts of project and change management.
 - 7. Business behaviours that influence how organisations operate.

Industry Placement – also part of the Core element

- 315 hours
- Assessed via an Employer Set Project. This takes place over 25 hours is a pre-set project that seeks to test both Core knowledge and practical application of these from the industry placement.

Occupational Specialism - assessed via externally set, marked and moderated tasks

- Business Improvement 595 Total Learner Hours focusing on:
 - Knowledge of how to acquire, protect and analyse data when seeking opportunities for business improvements
 - Knowledge of how to monitor and report on the implementation of business improvement activities
 - Skills in identifying and using suitable sources to collect, collate and protect data
 - Skills in using basic statistical techniques to analyse and correct different types of data
 - Skills in facilitating and communicating with different stakeholders engaging in the business improvement process.
 - Skills in preparing and presenting comprehensive plans and proposals for change management and business improvements.

Skills in monitoring and reporting on progress in the implementation process of business improvements

Entry requirements will be comparable to A Level.

This course is subject to change.

OCR Level 3 Cambridge Technical Extended Diploma in Business 3 A Levels

Cambridge Technical is an alternative to traditional A Level courses, taking a more engaging, practical approach to learning and assessment. The Cambridge Technical is more flexible for students and this course suits a wide range of learning styles as there is more focus on the coursework, so students are not under pressure to perform in a one-off test. Instead, the assessment and learning throughout the course gives students a much better indication of their progress, and therefore a greater chance of success. In order for students to obtain a Cambridge Technical extended Diploma, students must complete all 15 Units over 2 years. Pupils have the opportunity to apply for the Career Ready programme which offers paid work experience which they complete in the first year in July.

This qualification is suitable for learners

- Hoping to study Business related courses at University
- Looking to enter a Degree based apprenticeship, such as Bloomberg and UBS

Qualification structure

Learners must achieve a total of 15 units. 9 units are coursework and 6 units are examinations. Examinations are taken in January and May. The opportunity to resit is once and the best grade is taken.

Grading The units are graded Pass, Merit and Distinction. The qualification is graded PPP, PPM, PMM, MMM, MMD, MDD, DDD, DDD*, DD*D*, D*D*D*.

What are the entry requirements?

Students need to have achieved grade 4 or above in Maths and English.

Please note this course is subject to change.

OCR Cambridge Technical Extended Certificate in Business 1 A Level	
--	--

Learners will complete 5 Units over 2 Years. This is suitable for pupils who wish to gain points as they complete examinations and assignments.

2 Examinations are taken in January and May. The opportunity to resit is once and the best grade is taken. 3 assignments are completed over 2 years.

The grade will be a Pass, Merit, Distinction or Distinction*

What are the entry requirements?

Students need to have achieved grade 4 or above in Maths and English.

This course is subject to change.

The course combines a mixture of classroom theory, coaching and practical performance.

The Extended Diploma is a Tech Level qualification (meaning it will prepare you for employment) and takes 1080 guided learning hours to deliver. This means it is equivalent in **size to three A**-**levels** and will form your complete two-year study programme. You will **take 17 units**, made up of mandatory and optional units. Everybody will study the mandatory units:

- Body Systems and the Effects of Physical Activity
- Sports Coaching and Activity Leadership
- Performance Analysis in Sport and Exercise
- Nutrition and Diet for Sport and Exercise
- Sports injuries and Rehabilitation
- The Business of Sport
- Improving fitness for sport and physical activity
- Organisation of Sports Events
- Working in Active leisure facilities
- Sports Organisation and Development
- Working Safely in sport, exercise, health and leisure

- Physical Activity for Specific Groups
- Practical Skills in Sport and Physical activities

You will then be able to choose an additional four optional units from the following:

- Group Exercise to Music
- Biomechanics and Movement Analysis
- Health and Fitness Testing for sport and exercise
- Sport and exercise Psychology
- Sport and exercise Sociology.

This qualification is suitable for learners

- Hoping to study Science and other Sport related courses at University
- Looking to enter work and employment in a related field

Qualification structure

Learners must achieve a total of 17 units. 13 units are coursework and 4 units are examinations. Examinations are taken in January and May. The opportunity to resit is once and the best grade is taken.

Grading The units are graded Pass, Merit and Distinction. The qualification is graded PPP, PPM, PMM, MMM, MMD, MDD, DDD, DDD*, DD*D*, D*D*D*.

What are the entry requirements?

Students need to have achieved grade 4 or above in Maths and English.

This course is subject to change.

OCR Cambridge Technical Extended Certificate in Sport and Physical Activity 1 A Level

Learners will complete 5 Units over 2 Years. This is suitable for pupils who wish to gain points as they complete examinations and assignments.

2 Examinations are taken in January and May. The opportunity to resit is once and the best grade is taken. 3 assignments are completed over 2 years.

The grade will be a Pass, Merit, Distinction or Distinction*

What are the entry requirements? Students need to have achieved grade 4 or above in Maths and English.

This course is subject to change.

The aim of the course is to allow students to gain an understanding of how different businesses and organisations in the media sector work. When it comes to progression or employment, students will learn about the variety of opportunities available to them, and the roles and responsibilities of media businesses and organisations within the sector. This will make sure your students develop clear ideas about where they might like to take their career and what progression routes they'd like to follow.

Students will study 3 core units including

Unit 1 - Media Products and Audiences – Examined Unit

The aim of this unit is for students to develop their understanding of how different media institutions operate in order to create products that will appeal to specific target audiences. Students will learn about how audiences are categorised, researched and targeted by media producers. They will also learn about how media institutions distribute and advertise their products to audiences.

Unit 2 – Pre production and Planning – Examined Unit

This is a mandatory unit that forms the foundation of the course. By completing this unit, your students will understand the pre-production process the creative media industry follows when creating a product. This includes timescaling and resource planning and also legislation and constraints on planning

Unit 3 – Create a Media Product – Centre Assessed Unit

The aim of this unit is for students to develop knowledge and understanding of the production processes of producing a media product from one of the following:

- Print-based product
- Audio-visual product
- Audio product.

Student will also study at least two other media units to be confirmed by the centre eg Social Media and Globalisation, Journalism and the News Industry.

Progress

Cambridge Technical makes very strong use of ICT and provides a strong base for progression to university, apprenticeships or work and are recognised for UCAS tariff points*. Students can progress to careers in Games Design, Website Development and Social Media Development

What are the entry requirements?

Students need to have achieved grades 4 or above in Maths and English.

This course is subject to change.
